

## IT solutions that work for your business.

Liberty Computing Center (LCC) is a technology service provider established in 1991 and headquartered in New York City. Our 75 years of accumulated technical experience insures high quality service.

### NETWORKING AND WIRING

LCC can get your organization online, retrofitting existing office space or during the pre-finish phase of construction. We can supervise your Local Area Network and perform regular network evaluations to get the jump on issues that may arise with wiring, server security, login accounts and Internet access. Having the right team to address these issues and set up new computers on your network is integral to maintaining your organization's technology foundation.

## flexible solutions for your technology needs

In the last ten years an efficient computer network has become a necessity for any business. Without question, any company expecting to keep pace with today's high speed business world must now back that computer network with high-speed Internet connection. Such modern tools as a paperless office and unlimited file transfer capabilities make or break a business. With this new evolution it is more crucial than ever to facilitate these needs during the construction process. Contracting network installation in the early stages of construction is the most cost effective way to meet your needs. Addressing factors such as wiring within structure walls and concealed hardware prior to construction will take care of costly post-construction changes.

### VOICE OVER INTERNET PROTOCOL

VoIP enables you to make phone calls utilizing your high speed Internet connection and as a result, dramatically reduce your phone bill.

Special VoIP phones plug directly into your network and operate similarly to traditional telephones making the transition transparent to the end user.

### SECURITY SOLUTIONS

Custom engineered security solutions including, burglar alarms, video surveillance, access control and fire protection. We are licensed by the State of New York and you can be assured of our discreet and quality work.

Every security system is custom designed to provide the highest level of protection. Our systems are constantly monitored by a state of the art central station.

We design computerized video surveillance systems with strategically placed cameras to monitor and record activity in and around your premises. Images are stored electronically so you can view them remotely and archive events to CD.

WE'VE WORKED WITH A DIVERSE CUSTOMER BASE. HOW CAN WE HELP YOU?

Corporate, Small business, Non-Profit, Government, Education.

## OUTSOURCING
